NISSAN SAFETY SHIELD PHILOSOPHY

INNOVATION THAT LOOKS OUT FOR YOU

What if you had the confidence you need for every part of your drive? The Nissan Safety Shield philosophy is a comprehensive approach to safety that guides the engineering and development of every vehicle we make.

RESPOND

Whether you need to hit the brakes hard or manoeuvre around an unexpected obstacle, these standard technologies help you respond to a potentially harmful situation.

Vehicle Dynamic Control (VDC) helps you maintain your steered path.¹

Traction Control System (TCS) helps reduce wheelspin in low-traction situations.

Anti-lock Braking System (ABS) helps you maintain steering control around obstacles while braking heavily.

Electronic Brake force Distribution (EBD) sends extra force to the rear brakes when you have additional weight of passengers or cargo in the back.

Brake Assist helps apply maximum braking force if it detects hard braking and senses you are in an emergency situation.²

¹ VDC, which should remain on when driving except when freeing the vehicle from mud or snow, cannot prevent accidents due to abrupt steering, carelessness, or dangerous driving techniques. Brake Assist is only an aid to assist the driver and is not a collision warning or avoidance device. It is the driver’s responsibility to be in control of the vehicle at all times. Kindly refer to your Owner’s Manual for important safety warnings and cautions.

² Nissan’s advanced safety features are designed only to supplement the driver’s role in the prevention and control of vehicles. They are never a substitute for proper driving and safe driving techniques.
